#### Search

Dr. Melanie Martin CS 4480 September 13, 2010 Based on slides from http://aima.eecs.berkeley.edu/2nd-ed/slides-ppt/

#### Material

- Chapter 4 Section 1 3
- Exclude memory-bounded heuristic search

# Outline

- Best-first search
- Greedy best-first search
- A<sup>\*</sup> search
- Heuristics
- Local search algorithms
- Hill-climbing search
- Simulated annealing search
- Local beam search
- Genetic algorithms

#### **Review: Tree search**

 A search strategy is defined by picking the order of node expansion

function TREE-SEARCH( problem, strategy) returns a solution, or failure
initialize the search tree using the initial state of problem
loop do

if there are no candidates for expansion then return failure choose a leaf node for expansion according to *strategy* if the node contains a goal state then return the corresponding solution else expand the node and add the resulting nodes to the search tree

#### **Best-first search**

- Idea: use an evaluation function f(n) for each node
  - estimate of "desirability"
  - → Expand most desirable unexpanded node
- Implementation:
  - Order the nodes in fringe in decreasing order of desirability
- Special cases:
  - greedy best-first search
  - A<sup>\*</sup> search

# Romania with step costs in km

#### **Greedy best-first search**

- Evaluation function f(n) = h(n) (heuristic)
- = estimate of cost from n to goal
- e.g., h<sub>SLD</sub>(n) = straight-line distance from n to Bucharest
- Greedy best-first search expands the node that appears to be closest to goal

## Properties of greedy bestfirst search

- Complete? No can get stuck in loops,
   e.g., lasi → Neamt → lasi → Neamt →
- <u>Time?</u> O(b<sup>m</sup>), but a good heuristic can give dramatic improvement
- <u>Space?</u> O(b<sup>m</sup>) -- keeps all nodes in memory
- Optimal? No

## A\* search

- Idea: avoid expanding paths that are already expensive
- Evaluation function f(n) = g(n) + h(n)
- g(n) = cost so far to reach n
- h(n) = estimated cost from n to goal
- f(n) = estimated total cost of path through n to goal
