Before coming to lab, study Chapter 11 of Shiflet. Discuss each question below with your lab partners and do any computer work required.

Bring Shiflet with you to lab on Wednesday.

This week, instead of doing the Laboratory at the end of the chapter, work with your lab partner(s) to do Programming Project 5, parts a and b, on page 710 of Shiflet.

Use the `getline()` function to read text from `cin` (note that it is called as a function with an `istream` parameter and a `string` parameter, not as a `class ios` member function). Then repeatedly use the string member function `find()` to locate the blanks separating words, and the string member function `substr()` to extract the words. Form these words into a reverse sentence by concatenating each new word at the beginning of the reverse-sentence string.
